**Re: [FDA-2026-N-8004] Molecular and Clinical Genetics Panel of the Medical Devices Advisory Committee;
Notice of Meeting; Establishment of a Public Docket; Request for Comments -- GRAIL, Inc. Galleri**

Dear Members of the Panel,

We appreciate the opportunity to contribute comments on GRAIL's Premarket Approval application for the Galleri multi-cancer early detection (MCED) test.

The Chronic Care Policy Alliance (CCPA) is a national network of advocacy organizations working to improve care for people living with chronic conditions. Prevention, access to care, affordability, and quality are central to the policies we advance on their behalf.

People living with chronic disease may already be managing medications, appointments, and ongoing care when they receive a cancer diagnosis. Those existing health needs remain important as patients and their physicians consider cancer care. When cancer is found can matter in the context of everything else they are already balancing.

Multi-cancer early detection is among CCPA's healthcare innovation priorities because of its potential to expand the ways cancer can be found earlier. We support GRAIL's Premarket Approval application for the Galleri multi-cancer early detection test and encourage the Committee to consider the needs of people living with chronic disease as it evaluates the application.

Thank you for considering our comments on behalf of people living with chronic conditions across the country.

Respectfully,

Liz Helms
